elevator pitch

introducing...

CADSY

**our state-of-the-art opensource
sensitive content detector**

TEXT

IMAGE

VIDEO

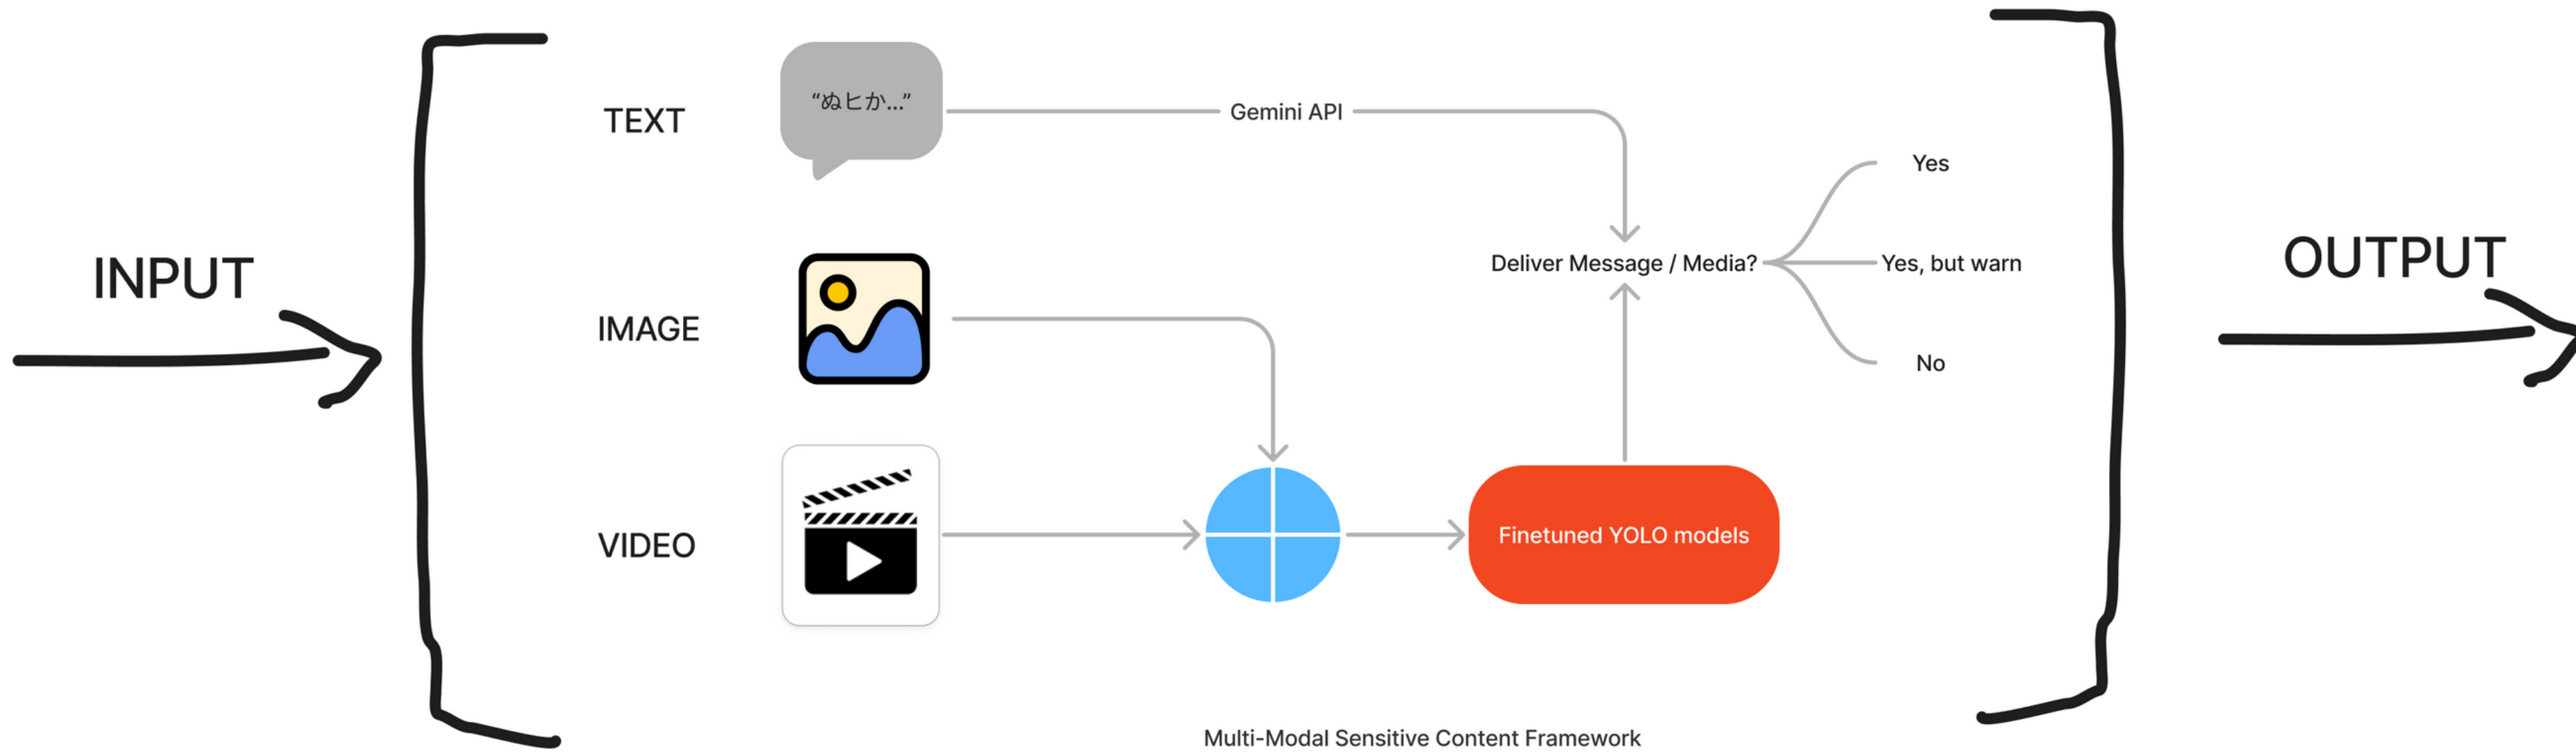

Current and potential implementations:

- **Sensitive Content Addressal**
- User Safety Enhancement
- **Omegle Shutdown Response**
- **Dating App Focus**
- Age Misrepresentation Solution
- **Unsolicited Content Prevention**

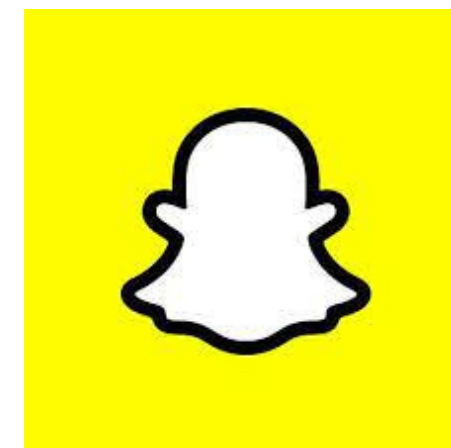

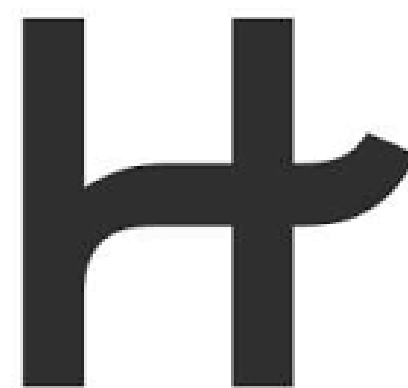

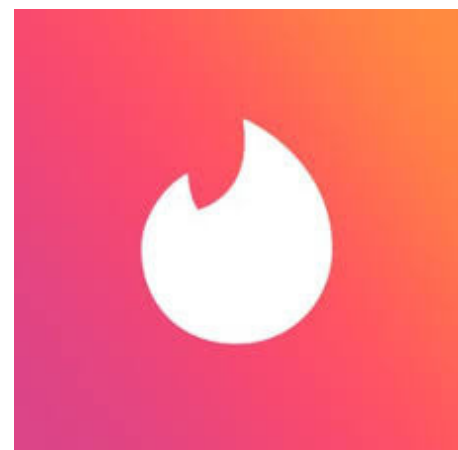

Cadsy is aimed at **video chat**, **social media** and **conference** platforms due to the surge of **sensitive content** on these sites.

Users of **Instagram**, **Facebook**, **X**, **Snapchat** and many more media giants have been both the **predator** and **victim** of exchanging such content. Moreover, the rise in traffic of sexual predators has led to the recent **shutdown** of video chat mogul **Omegle**.

Dating apps such as **Tinder**, **Bumble** and **Hinge** are a different scenario. Its 15 year olds pretending to be 21 year olds and 50 year olds pretending to be 30-somethings in a plastic conversation trying to get the other home before their parents do 😏. In the process, **unsolicited** conversations and/or media contents may be exchanged without either parties knowledge. This has affected a larger population of the **teenage mental health**.

our market...

Cadsy is an **opensource** framework available for Python as **pip** package and JS as **npm** package.

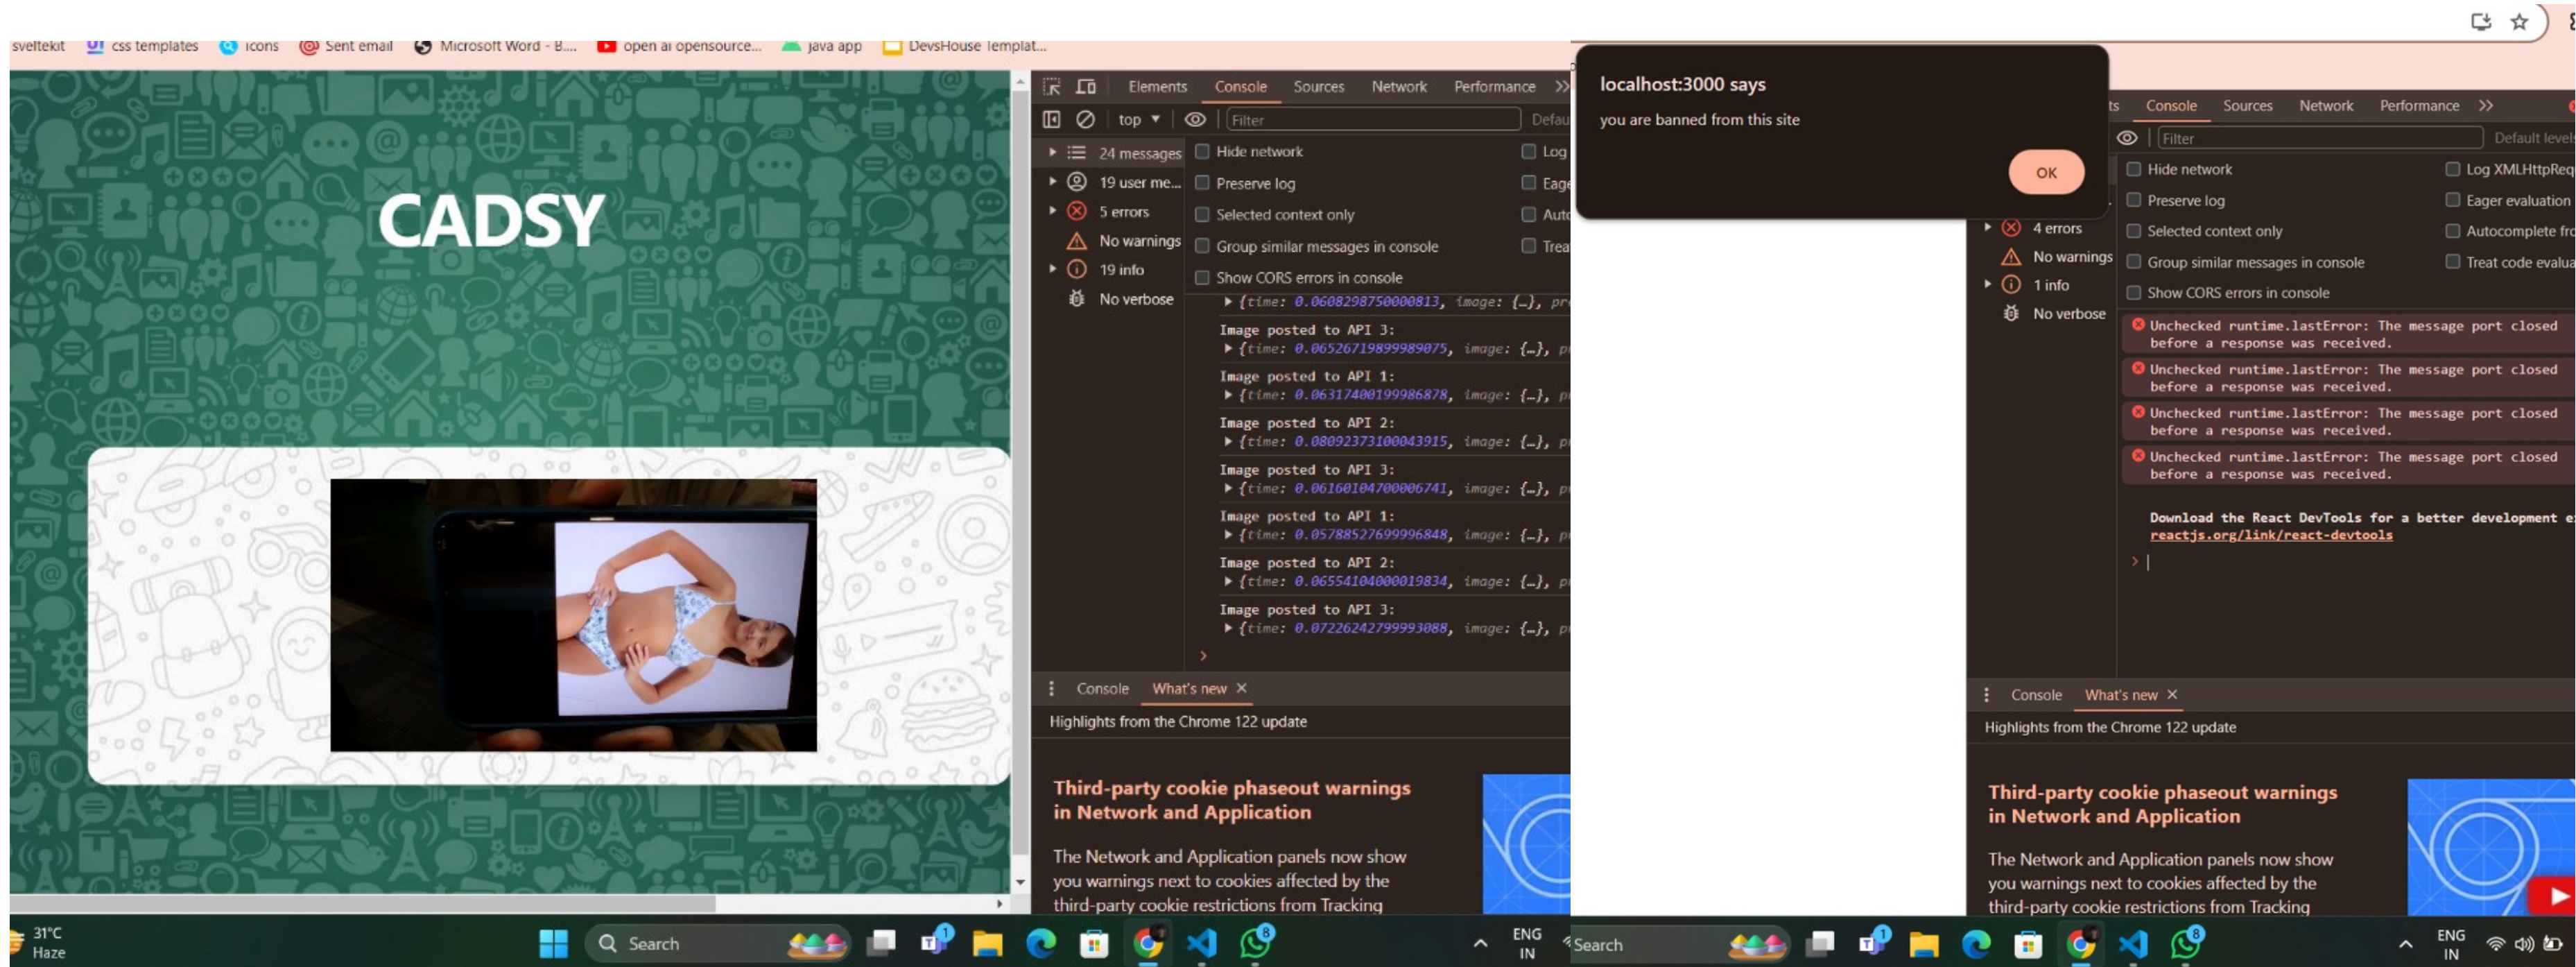

It is free and easy to import into your **projects** as follows:

- **npm i cadsy**
- **pip install -i <https://test.pypi.org/simple/> cadsy**
- **REST API endpoints**

- It is **flexible** wherein it can be **implemented into any existing service**
- Its **multi-modal** nature makes it suitable for any media-oriented application.
- Cadsy strives to do for all what the big media giants X, Meta and Google couldn't: to **democratize the control of sensitive content** to the people.
